## WORK EXPERIENCE

---

### **CONSULTANT GRAPHIC DESIGNER @ THE VILLAGE**

September 2019 - Present

I come up with creative graphical content for their websites, blogs and social media accounts. I also partake in managing their website using Wordpress for content management.

Researching and finding new marketing strategies for campaigns done by The Village.

### **UI/UX & FRONTEND DEVELOPER @ PAJUNO DEV COMPANY**

May 2019 - Present

My job in Pajuno required me creating and improving user interface and experience and increasing efficiency of the projects being developed.

Implemented the various designs in AngularJS and Bootstrap before sending to the backend development team. I also create graphical documents for the company's day to day task.

### **CUSTOMER SERVICE @ DIVINE LINKS GLOBAL NET.**

August 2018 - June 2019

My primary goal was to listen to customer complaints and provide solutions. I also worked with the marketing team to come up with strategies and content for the company.

I participated in street team marketing which included travelling to different parts of the state to targets consumers directly in front of a venue or store, and provides an entertaining way of getting across the company's personality with products and antics performed by the team.

### **WEB/GRAPHIC CONSULTANT DESIGNER @ SKYLAR INC.**

March 2016 - May 2018

Worked in Skylar Inc. as a consultant graphic and web designer coming up with intelligent designs and creation of brands and also using RWD (responsive web design) methods to create responsive and beautiful websites. I worked on projects ranging from CBT (ComputerBased Test) to a school management system.

I worked alongside other graphics designers in creating graphical content for inhouse projects and designing documents like proposals and brochures. Designs were made in Adobe Illustrator and Photoshop while Indesign was used for creating professional looking documents.

I was also a frontend developer working majorly with HTML, CSS, Javascript and Bootstrap Framework to transform user interface mockups to accessible web pages before sending the backend development team for further development.
